Background

Here's another housing scheme U-Roof have been involved with just outside Todmorden in West Yorkshire.

Brief

The overall project comprises of 21 semi-detached 3 storey town houses, which U-Roof were appointed to deliver the 1st phase of 6 four bedroom properties.

Work Carried Out

Large openings at ground level to the front elevations meant that some hot rolled elements had to be designed in to provide upper level support and stability.

Our 100mm wide wall panels were utilised for all load bearing walls, 225mm floors cassettes with services holes were designed to single span 5m gable to gable to form the intermediate floors, and due to the site conditions and 9.5m span front to back, our 165mm rafter panels were employed on this occasion to form the 30° pitched roof.
